

Postdoc position available in functional genomics

(September 1st, 2010 or before)

The Institute for Research in Ophthalmology (IRO) is looking for a talented young PhD to join a research program that investigates the function of newly discovered genes responsible for human ophthalmic disorders (see Schorderet et al. Am J Hum Genet.2008; Polok et al. Am J Hum Genet 2009). In this position, he/she will be responsible to dissect the role of these proteins, their expression, interaction and regulation, at a cellular level as well as in animal models, with a long term goal to develop virus-based gene therapy. This program is financed for a three-year period.

The candidate should have a good experience in molecular biology, cellular culture and animal research.

IRO, a research institute affiliated to the EPFL and the University of Lausanne, is located in Sion, in the centre of the Swiss Alps, at about 100 km from Lausanne. You can access our web page for further information and description of our research activities (<http://www.irovision.ch>).

Send letter of application and CV by e-mail to Daniel.Schorderet@irovision.ch
